

Exfoliation Treatments

Raspberry Peel

The mildest of our peels which contains 5% AHA and BHA. This gentle blend of acids and fruits stimulates renewal, improves texture and enhances strength. Fresh and vibrant fruit extracts and purees are both refreshing and nutritive.

Pumpkin Enzyme Peel

Excellent for all skin types, this highly concentrated; nutrient-rich pumpkin enzyme peel nourishes skin while enzymes decongest pores. This 100% natural fruit acid formula is rich in vitamin A and other minerals. This intensive therapy results in healthier, more vibrant looking skin.

Beta-Carrot

This beta carotene peel contains 10% lactic acid. It is rich in sea buckthorn, vitamin A and puree fruit enzymes. It's wonderful choice for those wanting to regain that youthful glow.

Wild Cherry Peel

\$40 Rich in antioxidants, the wild cherry peel contains 100% natural red cherry puree blended with pomegranate extract, pineapple enzymes, and wild cherry bark extract. This almost edible exfoliant is an invigorating peel that consists of 10% lactic acid and 5% salicylic acid.

Orange Peel Delight

\$40 This active and invigorating blend of acids and fruit will stimulate renewal, improve texture and enhance strength. The 5% lactic and 15% salicylic acid orange puree provides antioxidants to help control the free radicals that are a natural by-product of the skin's response to chemical exfoliants; thus the skin will resist excessive stress and instead focus on the repair and renew process.

Blue Agave Peel

\$40 This peel is beneficial for all skin types and especially ideal for mature and environmentally damaged skin. It contains 25% lactic acid which has natural water-binding abilities to help maintain the skin's moisture content. Other ingredients include nutrient-rich seaweed, blue agave and bilberry fruit extract.

Gly-Lactic Peel

\$40 This treatment consists of an application of a glycolic and lactic acid blend followed by a calming mask. The acid blend stimulates the breakdown of old, dead and damaged cells to accelerate the emergence of new cells. This will gradually reduce discolorations and help to restore a healthy skin thickness and tone.
